PROFESSIONAL SUMMARY

I don't just build what's asked. At RealPage, I evaluated Asana, Monday.com, and Jira, found what was missing for our PMO, and defined a product that replaced all three. Over 12 months, I co-owned PMOrbit from a blank slate to a production platform trusted by executives as their single source of truth, shipping features that cut handoff friction by 40% and made dashboards load 95% faster. I'm now looking to bring that same mix of product thinking and technical fluency to a PM role.

EDUCATION

Geethanjali College of Engineering and Technology
B.Tech in Information Technology | CGPA: 7.4/10

Hyderabad, India
Aug 2021 – May 2025

EXPERIENCE

Software Development Intern: Product & Delivery

Nov 2024 – Nov 2025

RealPage

Hyderabad, India

Phase 1: 0-to-1 Product Build

- Evaluated Asana, Monday.com, and Jira to identify PMO-specific gaps; defined a differentiated feature set for PMOrbit that replaced external tool dependency with an in-house solution.
- Interviewed PMO leads and executives to surface unmet needs, translating findings into requirements, user stories, and functional specifications for the engineering team.
- Co-owned the product roadmap, maintained a prioritized backlog, and bridged engineering and business teams across sprint planning sessions to keep feature progress visible to senior stakeholders.
- Delivered a **Team Management module** with full RACI matrix support and migrated email/SMS orchestration into resilient config services, restoring **100% delivery reliability**.

Phase 2: Platform Modernization & Feature Expansion

- Mapped the login-to-dashboard funnel via Excel-based analysis, uncovering two critical UX gaps; surfaced findings to engineering and both were resolved in the next sprint.
- Delivered role-aware dashboards, automated RAID logs, and portfolio overviews, reducing handoff friction by **40%**.
- Scoped a **PI Planning module** for Agile PI cycles and shipped **AskOrbit**, an AI chatbot for querying project health and portfolio status in natural language.
- Built automated **PDF report generation** for executive portfolios and re-engineered KPI widgets and risk heatmaps to load **95% faster**.

PROJECTS

KeyStay | *AI-Powered Vacation Rental Management Platform*

- Identified fragmented guest communication and manual booking tracking as core bottlenecks; scoped an MVP covering bookings, predictive analytics, and AI-driven guest interactions and maintained a prioritized backlog through delivery.

AgriDrone | *Drone-Based Agricultural Services Platform*

- Defined user personas through informal interviews, surfacing trust and geographic matching as the key adoption barriers; shaped geospatial matching logic and role-aware dashboards around those insights and led a 3-member team through iterative build cycles.

Moments-Mingle | *Social Connection Platform*

- Defined requirements for a privacy-focused social platform with secure pairing, activity planning, and real-time interactions, treating data privacy as a core product constraint.

SKILLS

Product Management: Requirements gathering, user story documentation, functional specifications, roadmap planning, backlog management, feature prioritization, user interviews, competitor analysis, KPI definition, funnel analysis

Delivery & Program Management: Sprint planning, sprint reviews, milestone tracking, stakeholder coordination, risk & dependency management, executive reporting

Technical: Full-stack development, React, TypeScript, .NET Core (C#), REST APIs, SQL, TailwindCSS, system design

Tools: Excel, Google Sheets, Figma, GitHub, Postman

CERTIFICATIONS

Project Management Fundamentals (IBM)

Scrum Fundamentals Certified (ScrumStudy) (Credential ID: 1141468)
